ABSTRACT OF THE INVENTION

5,0 81 5

Methods for forming fibrous-filtration-face-masks and shaping layers for the face masks, are disclosed. and layers produce which methods masks substantially reduced ability to form surface fuzz after being exposed to a normal degree of abrasion. The methods involve cold molding a non-woven web of thermally bonding fibers. To further reduce surface fuzz creation, a preskinning step may be employed. Also disclosed are fibrous filtration face masks that maintain low degrees of surface fuzz.
